

What every son, brother, husband, father, or friend ... needs to know.

Few people know about widespread unwanted, coerced or even forced abortions in America ...

Few fully understand its heartbreaking, even deadly, aftermath for teens and women of all ages — especially when the abortion was unwanted or even forced, or if family, friends and even experts have fostered or dismissed the injustice ... denied the grief ... or failed even to acknowledge the mothers who died from pregnancy-related violence or in the aftermath of abortion.

For decades, many women were denied help when they needed it most or given false or misleading information from trusted health care providers, parents and even pastors. Some were told there was no available help. Others were deceived about fetal development ... while still others were given no counseling whatsoever — even though they felt rushed and uncertain. Few were screened for evidence of coerced or forced abortion. Now, many are enduring significant, heartbreaking and even deadly aftereffects.

Why are they calling abortion the unchoice?

- 64% of abortions involve coercion
- 84% were not fully informed
- 52% felt rushed and 54% uncertain beforehand, yet ...
- 67% received *no* counseling beforehand, and
- 79% were not informed about alternatives

Clearly, this is not a free, fair or fully informed “choice.” Nor is it a just substitute for the full disclosure, meaningful alternatives and other support that women need and deserve.

Those who coerce or even force women into unwanted abortions need to know that ...

- Risk of death for women is 62% higher after abortion
- 31% suffer health complications after abortion
- 65% suffer symptoms of Post-Traumatic Stress Disorder (PTSD)
- 60% said “part of me died”
- Teens are 6 times more likely to commit suicide if they’ve had an abortion in the last 6 months
- Clinical depression risk is 65% higher after abortion
- Suicide rates are 6-7 times higher after abortion
